EDUCATION

Bachelor of Science (B.S.) Computer Science (Co-op): 4.06/4.33 CGPA:

Toronto Metropolitan University (formerly Ryerson University)

Sep 2022 – Dec 2026

Awards: Dean's List (2022 – 2026), Entrance Scholarship, Geoff Boyes International Award, Geoff Boyes Student Leadership Award

SUMMARY

Computer Science Co-op candidate with more than one year of **CIBC Technology experience across software development and technical systems analysis**. Experienced in building production banking applications, workflow automation, business analysis, testing, reporting, and Data & AI. Proven record of improving operational efficiency, reducing infrastructure costs, strengthening controls, and delivering technology solutions in financial-services environments.

TECHNICAL SKILLS

Languages: Swift, Python, Java, JavaScript, TypeScript, SQL, C/C++

Frameworks & Libraries: SwiftUI, UIKit, React, Node.js, Django, Angular

Tools & Platforms: Git, GitHub, Docker, Power BI, Excel VBA, Bash, SonarQube

Technologies & Concepts: REST APIs, Microservices, CI/CD, Agile/Scrum, Cloud Architecture, Unit Testing, Automation, ETL, Data Visualization

WORK EXPERIENCE

CIBC - Application/Software Developer Co-op
(CIBC LiveLabs)

Sep 2025 - Dec 2025

- Built production-grade banking feature for **Automated Money Movement**, supporting large-scale financial transaction workflows.
- Developed scalable **Swift / SwiftUI** components integrated with enterprise backend systems.
- Built a working **AI-enabled application prototype** designed to improve financial literacy and support better financial decision-making.
- Achieved **85%+ unit test coverage** and improved code quality using **SonarQube**
- Led **cost-optimization initiative**, reducing infrastructure costs by **25%+**

CIBC - Technical System Analyst

Sep 2024 - Sep 2025

- Automated workflows using **Excel VBA + Power BI**, reducing manual effort by **40%**
- Developed dashboards and analytical reporting that improved decision-making speed by 30%.**
- Analyzed and processed **100+ change requests per month**, supporting requirements validation, testing, implementation, and **100% compliance**.
- Strengthened validation processes and controls, contributing to a **25% reduction in operational risk incidents**.

Software Engineer Intern - Veebar Tech

May 2023 – Feb 2024

- Built backend systems using **Node.js, TypeScript, MongoDB** for scalable application workflows.
- Optimized data processing pipelines to improve real-time system performance.
- Created an iOS safety application for Alzheimer's patients with **under 1-second alert latency**.

Research Assistant [TMU]

Supervised: Dr. Alireza Sadeghian

Feb 2023 – May 2023

- Processed **50,000+ CIFAR-10 and ImageNet images** for computer vision experiments.
- Generated **Grad-CAM heatmaps** to improve model interpretability and support deep learning analysis.
- Worked with **TensorFlow and PyTorch** to support machine learning pipeline experimentation.

PERSONAL PROJECTS

Bank Management System — Java, Swing, MySQL | [source](#)

July 2024 - Sep 2024

- Developed a banking application with authentication, financial transactions, account management, and secure relational database design.

Java Geometry Engine — Java, libGDX | [source](#)

Feb 2024 - April 2024

- Built an interactive educational tool using OOP design patterns to visualize complex geometry concepts.
